Course Project for Regression Models

Myesha C Iqbal

25 October, 2023

Synopsis

Question: You work for Motor Trend, a magazine about the automobile industry. Looking at a data set of a collection of cars, they are interested in exploring the relationship between a set of variables and miles per gallon (MPG) (outcome). They are particularly interested in the following two questions:

1. "Is an automatic or manual transmission better for MPG"

2. "Quantify the MPG difference between automatic and manual transmissions"

Data Processing

```
setwd('D:\\Graduate Courses\\Miscellaneous\\Data Science Specialization\\Regression Models')
```

Setting up working directory

Display session information

```
sessionInfo()
```

```
library(ggplot2)
library(knitr)
```

Loading libraries

```
data(mtcars)

str(mtcars)
```

Loading the dataset and performing some basic exploratory data analyses

```
## 'data.frame':    32 obs. of  11 variables:
##  $ mpg : num  21 21 22.8 21.4 18.7 18.1 14.3 24.4 22.8 19.2 ...
##  $ cyl : num  6 6 4 6 8 6 8 4 4 6 ...
##  $ disp: num  160 160 108 258 360 ...
##  $ hp  : num  110 110 93 110 175 105 245 62 95 123 ...
##  $ drat: num  3.9 3.9 3.85 3.08 3.15 2.76 3.21 3.69 3.92 3.92 ...
##  $ wt  : num  2.62 2.88 2.32 3.21 3.44 ...
##  $ qsec: num  16.5 17 18.6 19.4 17 ...
##  $ vs  : num  0 0 1 1 0 1 0 1 1 1 ...
```

```
##  $ am  : num  1 1 1 0 0 0 0 0 0 0 ...
##  $ gear: num  4 4 4 3 3 3 3 4 4 4 ...
##  $ carb: num  4 4 1 1 2 1 4 2 2 4 ...
```

```
    am <- factor(mtcars$am, labels=c("Automatic","Manual"))  # (where, Automatic=0, Manual=1)

    vs <- factor(mtcars$vs)

    gear <- factor(mtcars$gear)

    carb <- factor(mtcars$carb)
```

Converting categorical variables as factors

```
head(mtcars)
```

Conitnuing diagnosis of the dataset

```
##                   mpg cyl disp  hp drat    wt  qsec vs am gear carb

Model Selection

```
summary(step(lm(mpg ~ ., mtcars), direction = "backward", trace = FALSE))
```

```
##
## Call:
## lm(formula = mpg ~ wt + qsec + am, data = mtcars)
##
## Residuals:
##     Min      1Q  Median      3Q     Max
## -3.4811 -1.5555 -0.7257  1.4110  4.6610
##
## Coefficients:
##             Estimate Std. Error t value Pr(>|t|)
## (Intercept)   9.6178     6.9596   1.382 0.177915
## wt           -3.9165     0.7112  -5.507 6.95e-06 ***
## qsec          1.2259     0.2887   4.247 0.000216 ***
## am            2.9358     1.4109   2.081 0.046716 *
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
##
## Residual standard error: 2.459 on 28 degrees of freedom
## Multiple R-squared:  0.8497, Adjusted R-squared:  0.8336
## F-statistic: 52.75 on 3 and 28 DF,  p-value: 1.21e-11
```

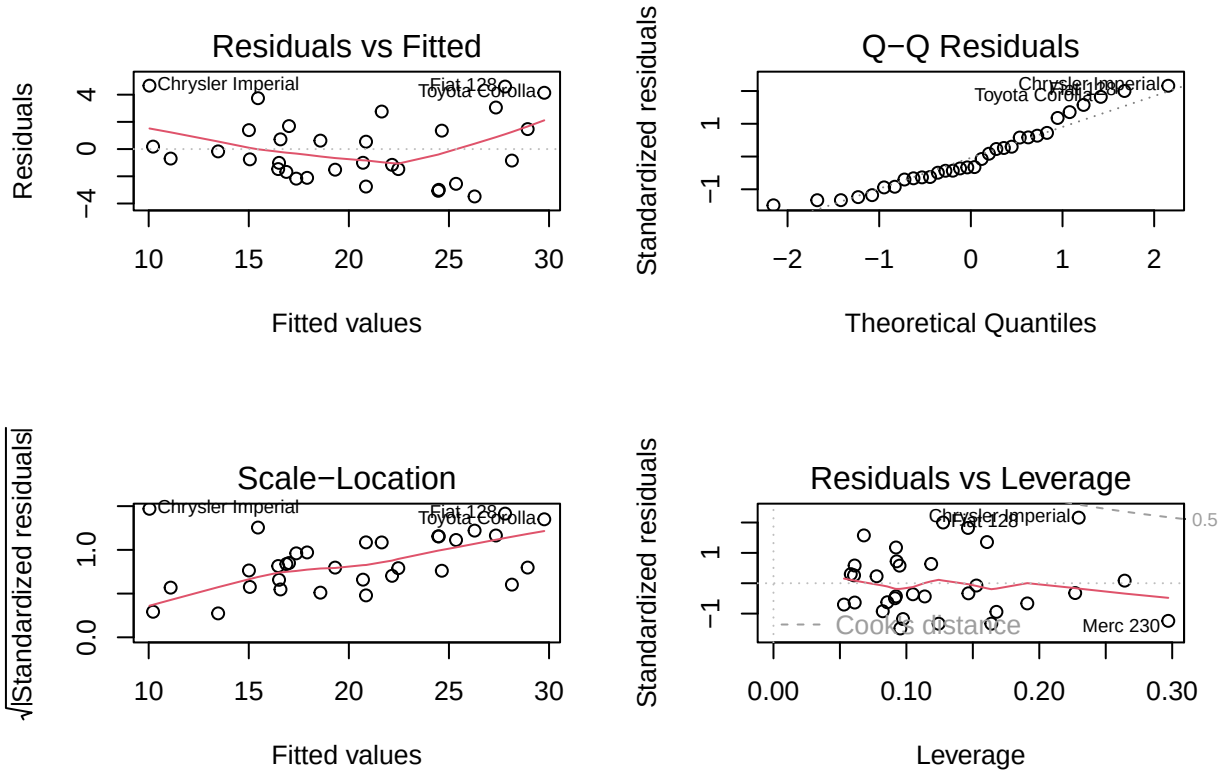
95% confidence interval for am

```
f <- lm(mpg ~ ., mtcars)
step_f <-step(f, direction = "backward", trace = FALSE)
confint(step_f)['am', ]
```

```
##      2.5 %     97.5 %
## 0.04573031 5.82594408
```

The confidence interval does include 0 and the p-value is larger than the 0.05 threshold. Failed to reject Null Hypothesis.

Residual Plot



Conclusion

There is a significant difference in mpg for Automatic and Manual transmission. A manual transmission will have slightly more Miles/(US) gallons than an automatic transmission.

The model selection process showed that weight(wt), horsepower(hp), & cylinders(cyl) are statistically significant covariates when determining mpg. Moreover, the multivariable regression model provided an R-squared value of over .83, suggesting that the multivariable model can explain 83% or more of the variance.
